- Vehicles 21
- Potentially explosive environments 21
- Certification information (SAR) 21

### OTHER IMPORTANT NOTICES 23

© 2009 Nokia. All rights reserved.
Read these simple guidelines. Not following them may be dangerous or illegal. Read the complete user guide for further information.

**SWITCH ON SAFELY**

Do not switch the device on when the use of wireless devices that require network connection is prohibited or when it may cause interference or danger.

**INTERFERENCE**

All wireless devices may be susceptible to interference, which could affect performance.

**SWITCH OFF IN RESTRICTED AREAS**

Follow any restrictions. Switch the device off in aircraft, near medical equipment, fuel, chemicals or blasting areas.

**QUALIFIED SERVICE**

Only qualified personnel may install or repair this product.

**ACCESSORIES AND BATTERIES**

Use only approved accessories and batteries. Do not connect incompatible products.

**WATER-RESISTANCE**

Your device is not water-resistant. Keep it dry.

---

**GLASS PARTS**

The display of your device is made of glass. This glass can break if the device is dropped on a hard surface or receives a substantial impact. If the glass breaks, do not touch the glass parts of the device or attempt to remove the broken glass from the device. Stop using the device until the glass is replaced by qualified service personnel.
1. Important information

Read all the installation and safety information before taking your device into use.

Charge the battery

Note: Use only a compatible charger to charge the battery.

Warning:
Do not use the charger of your device to charge any other devices. Connecting the charger to other devices may cause damage.

Your battery has been partially charged at the factory.

You do not need to charge the battery for a specific length of time, and you can use the device while it is charging.

Tip: You can charge an external device using a micro USB or Nokia 2 mm plug connection. Connect a mobile device, for example, using the supplied USB data cable. Charging an external device consumes power and your device battery discharges more quickly.

Hard disk protection

Your device comes with hard disk protection. This feature protects the disk surface from damage in case your device falls or there is some other sudden movement. Hard disk protection may save your data and hard disk from damage.

2. Support

Find support

When you want to learn more about how to use your product, or you are unsure how your device should function, for instructions and frequently asked questions, see the support pages at www.nokia.com/support or the online user guide.

If the issue remains unsolved, contact Nokia for repair options. See www.nokia.com/repair. Before sending your device for repair, always back up the data in your device.

In-device support

You can learn more about the features and functions of your device in the Help and Support application.

In the Help and Support application you can search for help topics and support services, and troubleshoot problems.

Open Help and Support

Select Start > Help and Support.
3. Keys and parts in your device

Keys and parts

1 Web camera
2 Microphone
3 Indicators
4 Function / Shortcut keys
5 Keyboard
6 Touch pad
7 Touch pad buttons
8 HDMI connector
9 USB connectors (USB 2.0)
10 Audio connector
11 Loudspeaker
12 Loudspeaker
13 Power key
14 Memory and SIM card slot cover
15 USB connectors
16 Charger connector
17 Battery

Remove the battery.
Push the battery latches toward the sides of the device to unlock them.

When the latches are properly opened, the battery is released, and you can remove it.

Indicators

Mains current (charger)
Battery
Sleep mode
3G connection active
Wireless LAN (WLAN) active
Bluetooth connection

**Keyboard shortcuts**
With keyboard shortcuts, you can use your device more efficiently.

**Function keys**

</tr>
</tbody>
</table>

**Power key**

**Switch device off if not responding**
Press the power key for at least four seconds.

**Start up in flight mode**
Press the power key for approximately 3 seconds to start up your device without activating the internal WLAN, 3G, or Bluetooth antenna.

**Deactivate flight mode**
Press fn+F10, and select the airplane icon.

To change the power scheme or shut down the device, for example, press the power key, and select from the following:

- **Balanced** — Balance performance with power consumption where possible.
- **High performance** — Prioritize performance over battery life.
- **Power saver** — Minimize power consumption.
- **Sleep** — Put the system in standby mode.
- **Restart** — Shut down your device, after which it starts up.
- **Shutdown** — Shut down your device.

**Antenna locations**
Your device may have internal and external antennas. Avoid touching the antenna area unnecessarily while the antenna is transmitting or receiving. Contact with antennas affects the communication quality and may cause a higher power level during operation and may reduce the battery life.
1 Cellular antenna / GPS antenna (on the left)
2 WLAN antenna
3 Bluetooth antenna

### Memory card

Use only compatible SD cards approved by Nokia for use with this device. Nokia uses approved industry standards for memory cards, but some brands may not be fully compatible with this device. Incompatible cards may damage the card and the device and corrupt data stored on the card.

A memory card may be already inserted in the device. If not, do the following:

1. Open the cover of the memory card slot.
2. Insert a compatible memory card in the memory card slot. Ensure that the contact area on the card is facing down. Push the card in. You can hear a click when the card locks into place.
3. Close the cover of the memory card slot. Ensure that the cover is properly closed.

**Tip:** You can also use a miniSD or microSD card with adapter.

**Important:** Do not remove the memory card during an operation when the card is being accessed. Doing so may damage the memory card and the device, and corrupt data stored on the card.

1. Open the cover of the memory card slot.
2. Press the memory card to release it from the slot.
3. Pull out the memory card.
4 Close the cover of the memory card slot. Ensure that the cover is properly closed.

Headset

You can connect a compatible headset that has a 3.5 mm connector to your device.

You can use the audio connector of your device also as an audio input, if you use a Nokia headset that includes a microphone.

Continuous exposure to high volume may damage your hearing. Listen to music at a moderate level.

4. Connectivity

You can connect to other compatible devices using different connections types.

Activate connection methods
Press fn + F10.

WLAN connections

To use a wireless LAN (WLAN) connection, it must be available in the location, and your device must be connected to the WLAN. Some WLANs are protected, and you need a passcode from the service provider or WLAN owner to connect to them.

Features using wireless LAN increase the demand on battery power and reduce the battery life.

Important: Always enable one of the available encryption methods to increase the security of your wireless LAN connection. Using encryption reduces the risk of unauthorized access to your data.

A WLAN connection is established when you select an available WLAN (a wireless router or wireless access point) and enter the required passcode, if the network is protected. The active WLAN connection is closed when you close the data connection.

Bluetooth connectivity

With Bluetooth connectivity, you can make a wireless connection to other compatible devices, such as cellular phones, computers, headsets, and car kits.

Since devices with Bluetooth wireless technology communicate using radio
waves, they do not need to be in direct line-of-sight. However, they must be within 10 metres (33 feet) of each other, although the connection may be subject to interference from obstructions such as walls or from other electronic devices.

This device is compliant with Bluetooth Specification 2.1 + EDR supporting the following profiles: advanced audio distribution, audio/video remote control, basic imaging, file transfer, dial-up networking, fax, generic access, generic object exchange, hard copy cable replacement, human interface device, object push, personal area networking, service discovery application, serial port, headset, and hands-free. To ensure interoperability between other devices supporting Bluetooth technology, use Nokia approved accessories for this model. Check with the manufacturers of other devices to determine their compatibility with this device.

Features using Bluetooth technology increase the demand on battery power and reduce the battery life.

When the device is locked, only connections to authorized devices are possible.

To protect your privacy, deactivate Bluetooth when not using it.

Security tips

When you are not using Bluetooth connectivity, deactivate it. Press fn + F10, and select the Bluetooth icon.

If you have activated flight mode, Bluetooth connectivity is deactivated.

Do not pair with or accept connection requests from an unknown device. This helps protect your device from harmful content. Operating the device in hidden mode is a safer way to avoid malicious software.

Fast packet data

High-speed packet access (HSPA, also called 3.5G) is a network service in UMTS networks and provides high-speed data download and upload. When HSPA support in the device is activated and the device is connected to a UMTS network that supports HSPA, downloading and uploading data such as e-mail and browser pages through the cellular network may be faster.

For availability and subscription to data connection services, contact your service provider.

USB data cable

Your device supports the USB 2.0 specification.

USB is compatible with devices such as a keyboard, mouse, camera, hard disk drive, printer, and scanner.

Some USB devices may require additional support software, which is usually included with the device. For more information about device-specific software, see the manufacturer's instructions.

Connect devices using the USB data cable

Connect a compatible USB data cable to a USB port in the device and in your Nokia Booklet 3G.
To avoid corrupting data, do not remove the USB data cable when data is being transferred.

Activate connections

In the connections dialog, you can view and select connections to use.

Select the connections dialog icon at the bottom right of the display. If no connections are available, to activate a connection method, press fn + F10.

5. Internet

Browse the internet

With your device, you can access the internet. You can connect to the internet using an available wireless LAN (WLAN) or a 3G network, with a SIM card provided by your network service provider.

Connect to the internet

1 Press fn + F10 and select a connection method (3G or WLAN).
2 To view the available connections, select the connections dialog icon at the bottom of the display.
3 Select the connection to use.
   If you select a secured WLAN, enter the passcode. If the WLAN you selected is hidden, enter the correct network name (service set identifier, SSID) and other necessary details.

Note: Only install and use applications and other software from trusted sources. Applications from untrusted sources may include malicious software that can access data stored in your device, cause financial harm, or damage your device.

Web camera

Your device has a 1.3 MP camera and an integrated microphone.
6. Social hub

With Social hub, you can send and receive text messages, and access social utilities on the internet. You can also view in full screen pictures and videos within the application, as well as view web browser links that have been gathered automatically during the day.

**Configure Social hub**
Press fn + F11, and follow the instructions.

**Open Social hub later**
Select the gadget on the desktop or a taskbar icon. When Social hub is active, a taskbar icon can also be used to access it.

**Modify Social hub settings**
Select Settings and modify the desired settings.

7. Positioning (GPS)

**About GPS**
Your device has an internal GPS receiver.

The Global Positioning System (GPS) is operated by the government of the United States, which is solely responsible for its accuracy and maintenance. The accuracy of location data can be affected by adjustments to GPS satellites made by the United States government and is subject to change with the United States Department of Defense civil GPS policy and the Federal Radionavigation Plan. Accuracy can also be affected by poor satellite geometry. Availability and quality of GPS signals may be affected by your location, buildings, natural obstacles and weather conditions. GPS signals may not be available inside buildings or underground and may be impaired by materials such as concrete and metal.

GPS should not be used for precise location measurement, and you should never rely solely on location data from the GPS receiver and cellular radio networks for positioning or navigation.

The GPS receiver draws its power from the device battery. Using the GPS receiver may discharge the battery more quickly.

**About assisted GPS**
Your device supports A-GPS (network service). With A-GPS, your device receives useful satellite information from an assistance data server over the cellular network. With the help of assisted data, your device can obtain the GPS position faster. When you activate an application that utilizes positioning information, to enable A-GPS you need to have a 3G network connection active.
Assisted GPS (A-GPS) is used to retrieve assistance data over a packet data connection, which assists in calculating the coordinates of your current location when your device is receiving signals from satellites.

Your device is preconfigured to use the Nokia A-GPS service, if no service provider-specific A-GPS settings are available. The assistance data is retrieved from the Nokia A-GPS service server only when needed.

**View your location**
Your current location is displayed in the map gadget on the desktop.

**View details**
Select the red spot.

**Open Ovi Maps**
Select the Ovi Maps icon in the map gadget.
Your current location is displayed in Ovi Maps.

**Ovi Maps**
With the Ovi Maps internet service, you can browse places from all over the world, plan trips, search for addresses and points of interest, and save them in your Ovi Maps account. You can also share your location with friends, and see where they currently are. In the current version of Ovi Maps, the turn-by-turn navigation feature is not available.

If the Maps 3.0 application is installed in your Nokia Booklet 3G, you can synchronize places, collections, and routes between Ovi Maps and your device.

Ovi Maps is free of charge. However, data transfer costs may apply if you establish an internet connection to synchronize your Nokia Booklet 3G with Ovi Maps. For information about data transmission charges, contact your network service provider.

**Tips on creating a GPS connection**
Initially your device must receive signals from at least four satellites to be able to calculate the coordinates of your location. When the initial calculation has been made, it may be possible to continue calculating your location with three satellites. However, the accuracy is generally better when more satellites are found.

Establishing a GPS connection may take from a couple of seconds to several minutes. Establishing a GPS connection in a vehicle may take longer.

If no satellite signal can be found, consider the following:

- If you are indoors, go outdoors to receive a better signal.
- If you are outdoors, move to a more open space.
- If the weather conditions are bad, the signal strength may be affected.
- Some vehicles have tinted (athermic) windows, which may block the satellite signals.

Ensure you do not cover the antenna with your hand.
8. Security and back up

Protect your device
You can protect your device from unauthorized usage or malicious software by using passwords and keeping your antivirus application up to date.

**Important:** Your device can only support one antivirus application. Having more than one application with antivirus functionality could affect performance and operation or cause the device to stop functioning.

Manage passwords
You are prompted to create a Windows password when you log in for the first time.
You can also create a password reset disk on a USB flash drive, so you can reset your password if you forget it. For instructions, select **Start > Help and Support** and enter **Create a password reset disk** in the search box.

Keep your password and your password reset flash drive secret and in a safe place, separate from your device.

Internet security
Your device has an antivirus application pre-installed.
To continue using the pre-installed antivirus application after the trial, you need to purchase the license from the internet security service provider.

Manage the PIN code
To disable or enable the PIN code inquiry, or to change the PIN code, select the connections dialog icon at the bottom of the display. Right click the connection name, and open the Security tab.

If you forget your PIN code, contact your network service provider.

Back up data
You can use the Windows backup functions to back up data. It is recommended that you save the backup to an external hard drive. It is also recommended that you back up your data weekly, or, if your data is very important, even daily.

You can also create a whole system image, which will allow you to restore the operating system in case of corruption of system files.

Restore the operating system using a system image

Create a system image
Select **Start > Help and Support** and enter **Create a system image** in the search box. Follow the instructions.

Restore a system image
Hold down the F8 key as your computer starts. You need to press F8 before the operating system logo appears. If the operating system logo appears, try again.

In the Advanced Boot Options screen, use the arrow keys to select **Advanced Boot Options > Repair your Computer.**
## 9. Wake up your device

<table>
<thead>
<tr>
<th>Wake your device from sleep mode if the lid is closed</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open the lid.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Wake your device from sleep mode if the lid is open</th>
</tr>
</thead>
<tbody>
<tr>
<td>Double-tap on either side of the touch pad.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Wake your device from hibernation mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Press and hold the power key approximately 3 seconds.</td>
</tr>
<tr>
<td>When hibernating, your device is in power save mode, which enables you to quickly access applications that you left open. It is recommended that you save the work in progress before setting your device to hibernate.</td>
</tr>
</tbody>
</table>

## 10. Maintain battery life

Many features in your device increase the demand on battery power and reduce the battery life time.

Features that use Bluetooth technology, or allowing such features to run in the background while using other features, increase the demand on battery power. Deactivate Bluetooth technology when you do not need it.

Features that use wireless LAN (WLAN), or allowing such features to run in the background while using other features, increase the demand on battery power. WLAN on your Nokia device deactivates when you are not trying to connect, not connected to an access point, or not scanning for available networks.

The brightness of the display affects the demand on battery power. To reduce the display brightness, press `fn+F7`. To increase the brightness, press `fn+F8`.

### Check the battery power status

To check the remaining battery power of your device, select the battery icon at the bottom right of the display, or press the power button.

### Purchase a new battery

Your device notifies you when you need to purchase a new battery. You can purchase a new battery only in a certified Nokia Store. To check the location of your nearest Nokia Store, see www.nokia.com.
11. Troubleshooting

Q: What is my password for the PIN or PUK codes?
A: If you forget a PIN or PUK code, or if you have not received such a code, contact your network service provider. For information about passwords, contact your access point provider, for example, a commercial internet service provider (ISP) or network service provider.

Q: What should I do if I start my device for the first time and nothing appears on the display?
A: Make sure that the battery is inserted properly, the power cord is attached to the device, and the power is switched on. Try to restart the device. If this does not help, contact your device dealer.

Q: Why does my device not respond when I press the power key?
A: The battery may be drained. Charge the battery. Make sure that you plugged the power adapter firmly into both the device and a power source.

Q: How do I wake my device from sleep mode if the lid is closed?
A: Open the lid.

Q: How do I wake my device from sleep mode if the lid is open?
A: Double-tap on either side of the touch pad.

Q: How do I wake my device from hibernation mode?
A: Press and hold the power key for about 3 seconds. If this does not help, the operating system may have stopped responding, and you cannot use your device. To switch off the device, press and hold the power key for at least 4 seconds. If the device still does not respond, remove and reinsert the battery, and press the power key to restart the device.

Q: What should I do if the operating system stops working, or my device does not respond?
A: To switch off the device, press the power key for at least 4 seconds.

Q: Why can't my device establish a GPS connection?
A: Establishing a GPS connection may take from a couple of seconds to several minutes. Establishing a GPS connection in a vehicle may take longer. If you are indoors, go outdoors to receive a better signal. If you are outdoors, move to a more open space. Ensure that your hand does not cover the GPS antenna of your device. If the weather conditions are bad, the signal strength may be affected. Some

© 2009 Nokia. All rights reserved.
vehicles have tinted (athermic) windows, which may block the satellite signals.

Q: Why can’t I find my friend’s device while using Bluetooth connectivity?

A: Check that both devices are compatible, have activated Bluetooth connectivity, and are not in hidden mode. Check also that the distance between the two devices is not over 10 meters (33 feet) and that there are no walls or other obstructions between the devices.

Q: Why can’t I end a Bluetooth connection?

A: If another device is connected to your device, you can end the connection from the other device or deactivate Bluetooth connectivity in your device. To deactivate Bluetooth connectivity, press fn+F10.

Q: Why can’t I see a wireless LAN (WLAN) access point even though I know I’m within its range?

A: The WLAN access point may use a hidden service set identifier (SSID). You can only access networks that use a hidden SSID if you know the correct SSID, and have created a WLAN internet access point for the network on your device.

Q: How do I deactivate the wireless LAN (WLAN) on my device?

A: Press fn+F10, and select the WLAN icon.

12. Green tips

Here are tips on how you can contribute to protecting the environment.

Save energy

When you have fully charged the battery and disconnected the charger from the device, unplug the charger from the wall outlet.

You do not need to charge your battery so often if you do the following:

- Close and disable applications, services, and connections when not in use.
- Decrease the brightness of the screen.
- Set the device to enter power saver mode after the minimum period of inactivity, if available in your device.

Recycle

Most of the materials in your Nokia device are recyclable. Check how to recycle your Nokia products at www.nokia.com/werecycle, or with a mobile device, www.nokia.mobi/werecycle.

Recycle packaging and user guides at your local recycling scheme.

Save paper

This user guide helps you get started with your device. By keeping the printed user guide short, we save tons of paper in printing and tons of gasoline for transportation, and we save trees and
help keep the air clean. However, we don't forget about you. You can find the needed support in your device and online. For more detailed instructions and support, see www.nokia.com/support.

Learn more
For more information on the environmental attributes of your device, see www.nokia.com/ecodeclaration.
About your device

The wireless device described in this guide is approved for use on the (E)GSM 850, 900, 1800, and 1900 MHz networks, and UMTS 850, 1900, and 2100 HSDPA networks. Contact your service provider for more information about networks.

Your device uses the network that is available at the time. This is called roaming. Roaming is based on specific roaming agreements between your network service provider and other network service providers to enable you to use network services outside your home network, for example when traveling abroad. For further information and roaming costs, contact your network service provider.

Your device supports several connectivity methods and like computers may be exposed to viruses and other harmful content. Exercise caution with messages, connectivity requests, browsing, and downloads. Only install and use services and software from trustworthy sources that offer adequate security and protection. Consider installing antivirus and other security software on your device.

Your device can generate heat when switched on or when battery is charging. Prolonged contact with your body, for example on your lap, might cause discomfort on your body or skin, or potentially a burn.

Your device may have preinstalled bookmarks and links for third-party internet sites and may allow you to access third-party sites. These are not affiliated with Nokia, and Nokia does not endorse or assume liability for them. If you access such sites, take precautions for security or content.

Warning:

To use any features in this device, the device must be switched on. Do not switch the device on when wireless device use may cause interference or danger.

When using this device, obey all laws and respect local customs, privacy and legitimate rights of others, including copyrights. Copyright protection may prevent some images, music, and other content from being copied, modified, or transferred.

Make back-up copies or keep a written record of all important information stored in your device.

When connecting to any other device, read its user guide for detailed safety instructions. Do not connect incompatible products.

The images in this guide may differ from your device display.

Refer to the user guide for other important information about your device.

Network services

To use the device you must have service from a wireless service provider. Some features are not available on all networks; other features may require that you make specific arrangements with your service provider to use them. Network services involve transmission of data. Check with your service provider for details about fees in your home network and when roaming on other networks. Your service provider can explain what charges will apply.

Your service provider may have requested that certain features be disabled or not activated in your device.

Standards

Your device is compliant with the following standards:

- EN 301 511 V9.0.2
- EN 300 328 V1.7.1
- EN 301 908-1/ -2 V3.2.1
- EN 301 489-1 V1.8.1/ -7 V1.3.1/ -17 V1.3.2/ -24 V1.4.1
- EN 60950-1:2001+A11:2004
- EN 62311:2008

Accessories

Warning:

Use only batteries, chargers, and accessories approved by Nokia for use with this particular model. The use of any other types may invalidate any approval or guarantee, and may be dangerous. In particular, use of unapproved chargers or batteries may present a risk of fire, explosion, leakage, or other hazard.

For availability of approved accessories, please check with your dealer. When you disconnect the power cord of any accessory, grasp and pull the plug, not the cord.

Battery

Battery and charger information

Your device is powered by a rechargeable battery. The battery intended for use with this device is BC-1S. Nokia may make additional battery models available for this device. This device is intended for use when supplied with power from the following chargers: AC-200. The exact charger model number may vary depending on the type of plug. The plug variant is identified by one of the following: E, EB, X, AR, U, A, C, K, or UB.

The battery can be charged and discharged hundreds of times, but it will eventually wear out. When the talk and standby times are noticeably shorter than normal, replace the

© 2009 Nokia. All rights reserved.
battery. Use only Nokia approved batteries and recharge your battery only with Nokia approved chargers designated for this device.

Avoid extreme temperatures. Always try to keep the battery between 59°F and 77°F (15°C and 25°C). Extreme temperatures reduce the capacity and lifetime of the battery. A device with a hot or cold battery may not work temporarily. Battery performance is particularly limited in temperatures well below freezing.

Do not short-circuit. Accidental short-circuiting can occur when a metallic object such as a coin, clip or pen causes direct connection of the positive (+) and negative (-) terminals of the battery. (These look like metal strips on the battery.) This might happen, for example, when you carry a spare battery in your pocket or purse. Short-circuiting the terminals may damage the battery or the connecting object.

Disposal. Do not dispose of batteries in a fire as they may explode. Dispose of batteries according to local regulations. Please recycle when possible. Do not dispose as household waste.

Leak. Do not dismantle, cut, open, crush, bend, puncture, or shred cells or batteries. In the event of a battery leak, prevent battery liquid contact with skin or eyes. If this happens, flush the affected areas immediately with water, or seek medical help.

Damage. Do not modify, remanufacture, attempt to insert foreign objects into the battery or immerse or expose it to water or other liquids. Batteries may explode if damaged.

Correct use. Use the battery only for its intended purpose. Improper battery use may result in a fire, explosion or other hazard. If the device or battery is dropped, especially on a hard surface and you believe the battery has been damaged, take it to a service center for inspection before continuing to use it. Never use any charger or battery that is damaged. Keep your battery out of the reach of small children.

These suggestions apply equally to your device, battery, charger, or any accessory.

Taking care of your device

Your device is a product of superior design and craftsmanship and should be treated with care. The following suggestions will help you protect your warranty coverage.

• Set up your device on a stable work surface.

• Do not restrict or block any ventilation slots or fans. Do not overheat the device.

• Keep the device dry. Precipitation, humidity, and all types of liquids or moisture can contain minerals that will corrode electronic circuits. If your device does get wet, remove the battery and allow the device to dry completely before replacing it.

• Do not use or store the device in dusty, dirty areas. Its moving parts and electronic components can be damaged.

• Avoid subjecting your device to extreme temperatures, below 0 or above 40 degrees Celsius (below 32 or above 104 degrees Fahrenheit).

• Do not store the device in high or cold temperature. High temperatures can shorten the life of electronic devices, damage batteries, and warp or melt certain plastics. When the device warms to its normal temperature from a cold temperature, moisture can form inside the device and damage electronic circuit boards.

• Carry your device properly when in the sleep or hibernation mode, or turned off. Use a carrying case that provides adequate protection.

• Do not attempt to replace any parts in the device yourself, such as WLAN card or display. Always contact the nearest authorized service facility for repair. Replacing parts yourself may cause warranty to expire.

• Do not drop, knock, or shake the device. Rough handling can break internal circuit boards and fine mechanics.

• Do not use harsh chemicals, cleaning solvents, or strong detergents to clean the device. Only use a soft, clean, dry cloth to clean the surface and display of the device. When removing the battery, you may clean the exterior using a soft, clean, dry cloth. Switch off your device before removing the battery.

• Do not paint the device. Paint can clog the moving parts and prevent proper operation.

• Use only the supplied or an approved replacement antenna. Unauthorized antennas, modifications, or attachments could damage the device and may violate regulations governing radio devices.

• Use chargers indoors.

• If you suspect your device needs service or repair, switch off the device, disconnect the power plug, and remove the battery.

Recycle

Always return your used electronic products, batteries, and packaging materials to dedicated collection points. This way you help prevent uncontrolled waste disposal and promote the recycling of materials. Check product environmental information and how to recycle your Nokia products at www.nokia.com/werecycle, or www.nokia.mobi/werecycle.
Additional safety information

Small children
Your device and its accessories are not toys. They may contain small parts. Keep them out of the reach of small children.

Operating environment

This device meets RF exposure guidelines when used in the illustrated normal use position, in direct contact with the body.

Parts of the device are magnetic. Metallic materials may be attracted to the device. Do not place credit cards or other magnetic storage media near the device, because information stored on them may be erased.

Medical devices
Operation of radio transmitting equipment, including wireless phones, may interfere with the function of inadequately protected medical devices. Consult a physician or the manufacturer of the medical device to determine whether they are adequately shielded from external RF energy. Switch off your device when regulations posted instruct you to do so. Hospitals or health care facilities may use equipment sensitive to external RF energy.

Implanted medical devices
Manufacturers of medical devices recommend a minimum separation of 15.3 centimeters (6 inches) between a wireless device and an implanted medical device, such as a pacemaker or implanted cardioverter defibrillator, to avoid potential interference with the medical device. Persons who have such devices should:

- Always keep the wireless device more than 15.3 centimeters (6 inches) from the medical device.
- Switch the wireless device off if there is any reason to suspect that interference is taking place.
- Follow the manufacturer directions for the implanted medical device.

If you have any questions about using your wireless device with an implanted medical device, consult your health care provider.

Hearing aids
Some digital wireless devices may interfere with some hearing aids.

Vehicles
RF signals may affect improperly installed or inadequately shielded electronic systems in motor vehicles such as electronic fuel injection, electronic antilock braking, electronic speed control, and air bag systems. For more information, check with the manufacturer of your vehicle or its equipment.

Only qualified personnel should service the device or install the device in a vehicle. Faulty installation or service may be dangerous and may invalidate your warranty. Check regularly that all wireless device equipment in your vehicle is mounted and operating properly. Do not store or carry flammable liquids, gases, or explosive materials in the same compartment as the device, its parts, or accessories. Remember that air bags inflate with great force. Do not place your device or accessories in the air bag deployment area.

Switch off your device before boarding an aircraft. The use of wireless teledevices in an aircraft may be dangerous to the operation of the aircraft and may be illegal.

Potentially explosive environments
Switch off your device in any area with a potentially explosive atmosphere. Obey all posted instructions. Sparks in such areas could cause an explosion or fire resulting in bodily injury or death. Switch off the device at refueling points such as near gas pumps at service stations. Observe restrictions in fuel depots, storage, and distribution areas; chemical plants; or where blasting operations are in progress. Areas with a potentially explosive atmosphere are often, but not always, clearly marked. They include areas where you would be advised to turn off your vehicle engine, below deck on boats, chemical transfer or storage facilities and where the air contains chemicals or particles such as grain, dust, or metal powders. You should check with the manufacturers of vehicles using liquefied petroleum gas (such as propane or butane) to determine if this device can be safely used in their vicinity.

Certification information (SAR)
This mobile device meets guidelines for exposure to radio waves.
Your device model can act as a radio transmitter and receiver. It is designed not to exceed the limits for exposure to radio waves recommended by international guidelines. These guidelines were developed by the independent scientific organization ICNIRP and include safety margins designed to assure the protection of all persons, regardless of age and health.

The exposure guidelines employ a unit of measurement known as the Specific Absorption Rate or SAR. The SAR limit stated in the ICNIRP guidelines is 2.0 watts/kilogram (W/kg) averaged over 10 grams of tissue. Tests for SAR are conducted using standard operating positions with the device transmitting at its highest certified power level in all tested frequency bands. When used in the normal use position, that is in direct contact with the body (as illustrated above), this device meets the ICNIRP exposure guidelines.

Your device is also designed to meet the requirements for exposure to radio waves established by the Federal Communications Commission (USA) and Industry Canada. These requirements set a SAR limit of 1.6W/kg averaged over one gram of tissue. The highest SAR value reported under this standard during product certification when used in the normal use position, that is in direct contact with the body, is 0.06 W/kg.

MANUFACTURER’S LIMITED WARRANTY
Nokia Inc. ("Nokia") provides this Manufacturer’s Limited Warranty ("MLW") with respect to the Nokia hardware product(s) included in the sales package ("Product") purchased by you (the “Consumer”).

Nokia warrants that during the warranty period, Nokia or a Nokia authorized service provider will in a commercially reasonable time and free of charge remedy hardware defects in materials, design, and workmanship by repairing the Product or, should Nokia in its discretion deem it necessary, replacing the Product in accordance with this MLW. This MLW extends only to Consumers who purchase the Product in the United States of America.

Warranty period
The warranty period starts at the time of the Product’s original purchase by the first Consumer (hereinafter "Warranty Period"). The Warranty Period is twelve (12) months for the main computer unit, accessories (whether included in the main computer unit sales package or sold separately), and consumable parts such as batteries, chargers and cables.

Nokia is not the creator or manufacturer of the software operating system or any operator connectivity software used for operator network access and does not warrant that any such software will be error free or its use uninterrupted. For information on what you should do in the case of an error therein, consult the warranty offered by the creator and manufacturer of the software.

The Warranty Period will not be extended or renewed or otherwise affected due to subsequent resale, Nokia authorized repair, or replacement of the Product. However, original parts that are repaired or replacement parts that are installed as part of the authorized warranty service and during the Warranty Period will be warranted for the remainder of the original Warranty Period or for sixty (60) days from the date of repair or replacement, whichever is longer.

During the Warranty Period, Nokia will repair, or replace, at Nokia’s sole option, any defective parts, or any parts that will not properly operate for their intended use with new or refurbished replacement items if such repair or replacement is needed because of product malfunction or failure during normal usage. No charge will be made to the Consumer for any such parts. Nokia will also pay for the labor charges incurred by Nokia in repairing or replacing the defective parts. Nokia’s limit of liability under this MLW shall be the actual cash value of the Product at the time the Consumer returns the Product for repair, determined by the price paid by the Consumer for the Product less a reasonable amount for usage. Nokia shall not be liable for any other losses or damages. These remedies are the Consumer’s exclusive remedies for breach of warranty.

How to get your warranty service
If you suspect that the Product is experiencing an issue that may require service under this MLW, go to www.nokiausa.com/support, and follow the instructions on how to troubleshoot the suspected issue and how to proceed thereafter. Alternatively, contact Nokia at 1-888-NOKIA-2U (1-888-665-4228) (TTY/TDD Users Only call 1-800-246-6542) for assistance. When contacting Nokia, make sure you have the following information readily available:

- Consumer’s name, address, telephone number, and other contact information;
- Product type, name, model number, product code, and serial number;
- Date and place of purchase, as well as the name of the retailer from whom the Product was originally purchased. (Nokia may require a copy of a dated, itemized receipt as proof of purchase.); and
- A short description of the issue affecting the Product. Any claim under this MLW is subject to the Consumer notifying Nokia or a Nokia authorized service partner of the alleged issue within a reasonable time of it having come to the Consumer’s attention and in any event no later than fourteen (14) days after the expiration of the Warranty Period.
To provide the best possible support, the call center agent may need to assume remote control of the Product. This is standard operating procedure, and the call center agent will advise you before he or she takes control of your Product. By calling the call center, the Consumer expressly consents to the call center agent taking remote control of the Product if this is necessary to provide support.

What is not covered?
1. This MLW does not cover user manuals or software (including updates and upgrades to the software), settings, content, data or links, whether included or downloaded in the Product, whether included during installment, assembly, shipping or at any other time in the delivery chain or otherwise and in any way acquired by the Consumer. Nokia does not warrant that any software (including updates and upgrades to the software) will meet the Consumer’s requirements or will work in combination with any hardware or software provided by a third party, that the operation of any software (including updates and upgrades to software) will be uninterrupted or error free or that any defects in the software (including updates and upgrades to software) are correctable or will be corrected.

2. This MLW does not cover a) normal wear and tear (including, without limitation, wear and tear of batteries, displays, or paint on the outer surface of the Product), b) defects caused by rough handling (including, without limitation, defects caused by sharp items, by bending, by compressing, or by dropping), or c) defects or damage caused by misuse of the Product, including use that is contrary to the instructions provided by Nokia (for example, as set out in the Product’s user guide) and/or e) other acts beyond the reasonable control of Nokia.

3. This MLW does not cover defects or alleged defects caused by the fact that the Product was used with, or connected to, any product, accessory, software and/or service not manufactured or supplied by Nokia or was used other than for its intended use. Defects can be caused by viruses from the Consumer’s or from a third party's unauthorized access to services, other accounts, computer systems or networks. This unauthorized access can take place through hacking, password mining or through a variety of other means.

4. This MLW does not cover defects caused by the battery having been short-circuited or the seals of the battery enclosure or the cells being damaged or showing evidence of tampering or the battery being used in equipment other than that for which it has been specified.

5. This MLW does not cover reduced charging capacity of the battery, which is a result of the natural end-of-life process of batteries.

6. This MLW does not cover any loss or corruption of, or damage to, data or the recreation or transfer thereof even if such loss was a result of a defect in the Product.

7. This MLW does not cover pixel defects in the Product display that are within the scope of industry standards. For more information on pixel defects and industry standards, go to www.nokiausa.com/support.

8. This MLW is not enforceable if the Product has been opened, modified or repaired by anyone other than an authorized service center, if it is repaired using unauthorized spare parts, or if the Product’s serial number, the mobile accessory date code or the IMEI number has been removed, erased, defaced, altered or are illegible in any way as determined in the sole discretion of Nokia.

9. This MLW is not enforceable if the Product has been exposed to moisture, to dampness or to extreme thermal or environmental conditions, to rapid changes in such conditions, to corrosion, to oxidation, to spillage of food or liquid, or to influence from chemical products.

10. This MLW does not include any onsite service or support.

11. This MLW does not cover alleged issues resulting from events of force majeure or other unforeseen events.

12. This MLW is not enforceable if Nokia was not advised in writing by the Consumer of the alleged defect or malfunction of the Product no later than fourteen (14) days after the expiration of the applicable limited warranty period.

Other important notices
A third-party, independent operator provides the SIM card and cellular and/or other network or system on which the Product operates. Therefore, Nokia is not liable under this warranty for the operation, availability, coverage, services or range of the cellular or other network or system.

Make sure you make back-up copies or keep written records of all important content and data stored in the Product. Nokia, in a manner consistent with the provisions of the section entitled "Limitation of Nokia's Liability" below, shall not under any circumstances be liable, either expressly or implicitly, for any damages or losses of any kind whatsoever resulting from loss of, damage to, or corruption of content or data or the recreation thereof or transfer even if such a loss, damage, or corruption was a result of a defect in the Product. Always back up your data stored on the Product before taking the Product in for service since service activities will erase the memory of the Product, including content and data.

All parts of the Product or other equipment that Nokia has replaced shall become the property of Nokia. If the Product is returned during the Warranty Period, but the problem with
DURING THE PERIOD THAT THE PRODUCT IS BEING REPAIRED.

Nokia shall not be liable for or equitable theory, even if Nokia knew of the likelihood of such damages. Nokia shall not be liable for special, incidental, punitive or consequential damages, including, but not limited to, loss of data, punitive damages, loss of use, loss of revenue, loss of savings or earnings, or loss of use of the product or any associated equipment, cost of capital, cost of any substitute equipment or facilities, downtime, the claims of any third parties, and injury to property resulting from the purchase or use of the product or arising from breach of the warranty, breach of contract, negligence, strict tort, or any other legal or equitable theory, even if Nokia knew of the likelihood of such damages. Nokia shall not be liable for delay in rendering service under this MLW or loss of use during the period that the product is being repaired.

This MLW allocates the risk of failure of the Product between the Consumer and Nokia. The allocation is recognized by the Consumer and is reflected in the purchase price.

Arbitration Provision. Any and all claims, disputes or controversies of any nature whatsoever (whether in contract, tort, or otherwise, including statutory, common law, fraud, other intentional tort, property and equitable claims) arising out of, relating to, or in connection with (1) this limited warranty, (2) the relationships which result from this limited warranty, including, to the full extent permitted by applicable law, relationships with third parties who are not signatories to this limited warranty or this arbitration provision or (3) the validity, scope or enforceability of this arbitration provision or the entire limited warranty (“Claim”) shall be resolved by arbitration, which shall be conducted pursuant to the American Arbitration Association (the “AAA”) Wireless Industry Rules and Procedures in effect at the time the Claim is filed. Any arbitration which you attend will take place at a location within the federal judicial district that includes your billing address. Upon written request, Nokia will advance to you either all or part of the fees of the AAA and of the arbitrator. The arbitrator will decide whether you or Nokia will ultimately be responsible for these fees. The arbitrator shall apply relevant, substantive law and applicable statutes of limitation and shall provide written reasoned findings of fact and conclusions of law. This arbitration agreement is made pursuant to a transaction involving interstate commerce and shall be governed by the Federal Arbitration Act, 9 U.S.C. Sections 1, et. seq. A single arbitrator engaged in the practice of law shall conduct the arbitration, and the arbitrator's decision and award shall be final and binding, and judgment upon the award may be entered in any court having jurisdiction over this matter. All claims must be arbitrated individually, and there will be no consolidation or class treatment of any claims. If the foregoing class action waiver is deemed invalid or unenforceable, this entire

© 2009 Nokia. All rights reserved.
arbitration provision shall be stricken from this limited warranty and be deemed unenforceable. YOU AND NOKIA UNDERSTAND AND AGREE THAT BECAUSE OF THIS ARBITRATION CLAUSE NEITHER YOU NOR NOKIA WILL HAVE THE RIGHT TO GO TO COURT EXCEPT AS PROVIDED BELOW OR TO HAVE A JURY TRIAL. IN ACCORDANCE WITH THE ARBITRATION RULES, HOWEVER, YOU MAY, AT YOUR ELECTION, PURSUE AN ACTION AVAILABLE IN SMALL CLAIMS COURT IN LIEU OF ARBITRATING THE DISPUTE. Any action or lawsuit for breach of warranty must be commenced within thirty (30) months following purchase of the Product.

All warranty information, product features and specifications are subject to change without notice.
